OBJECTIVE

I have highly skilled and dedicated MERN Stack developer with 4+ years of experience in designing and developing visually appealing, user-friendly interfaces. Seeking a challenging role to leverage my technical skills and creativity to deliver exceptional user experiences and contribute to the success of an organization.

PROFESSIONAL SUMMARY

- Overall 4+ years of experience in software developer in MERN with a demonstrated history in designing, development of the UI for large- scale applications. Proven ability to balance big picture thinking while conceptualizing and executing project details. Played a key role in UI Development. Passionate about coding and learning. Converted innovations either as a product or part of the product. Adept at prioritizing and balancing multiple projects in a constantly evolving environment.
- Develop user-facing features using React.js and Node js ensuring implementation of the visual elements that users interact with in the web application.
- Utilize Redux for managing application state, maintaining consistency, handling data flow, and managing asynchronous actions in the application.
- Client interaction & customer relationship management on requirement analysis, software development & enhancements.
- Drive efforts towards maintaining development practices, adhered to company standards for coding.
- Experience in requirement analysis phase along with guiding juniors if they get blocked during development phase.
- Track records of providing solutions to client requirements which involves design, structure, and transformation of data as per business rules for graphical representation on front-end.
- Proficient in smooth implementation/ testing of the application and extending post GO-LIVE and application maintenance support to the client
- A good communicator with team in planning as well as problem solving.
- Experience in developing Web based and mobile based with using React Js, Redux,HTML5 and CSS3, Media Queries, Bootstrap, JavaScript, Redux and Node js, Express js and Mango db.
- Optimize applications for maximum speed and scalability, ensuring optimal performance across various web-capable devices and browsers.
- Perform application testing, troubleshoot and debug to ensure smooth user experience. Use testing frameworks like Jest or Mocha to perform these tasks.
- Reusable components and front-end libraries for future use, enhancing efficiency and readability of code.
- Participate in code reviews and ensure that the code adheres to best practices. This can include proper commenting, formatting, and use of design patterns.
- Collaborate with back-end developers and web designers to improve usability and meet product stakeholder requirements.
- Write software documentation ranging from user stories to API documentation, ensuring optimal communication within the team and future maintainability.

- Keep up with maintenance and updates of existing projects, ensuring optimal functioning and implementation of new features as needed.
- Stay up-to-date and expand your knowledge on relevant tools, languages, and frameworks, particularly focusing on advancements in the React and Redux and Node js ecosystem.
- Designed and coded with Responsive web design (RWD) using media queries.
- Good understanding and work Experience in ES6 and ES5.
- Implemented the service projects on the Agile Methodology

TECHNICAL SKILLS

- **Frontend Development:** Proficient in HTML5, CSS3, and JavaScript, with a strong understanding of responsive design principles. Skilled in creating engaging and user-friendly interfaces.
- **UI Frameworks and Libraries:** Extensive experience with popular UI frameworks and libraries such as React, Angular, or Vue.js. Proficient in building dynamic and interactive web applications.
- **Back end Frameworks and Libraries:** Extensive experience with popular Back end frameworks and libraries such as Node js, Express js, sql and Mango db.
- **UI Design Tools:** Proficient in using design tools like Adobe Photoshop, Sketch, or Figma to create visually appealing UI mockups and wireframes.
- **JavaScript Frameworks and Libraries:** Strong expertise in using JavaScript frameworks and libraries such as Bootstrap, or Material-UI to enhance user experience and streamline development.
- **CSS Preprocessors:** Experience with CSS preprocessors like Sass or Less to write modular and maintainable CSS code. Familiarity with CSS methodologies such as BEM or SMACSS.
- **Cross-Browser Compatibility:** Knowledge of best practices for ensuring cross-browser compatibility and optimizing web applications for different browsers and devices.
- **UI Testing and Debugging:** Proficient in using browser developer tools for debugging and troubleshooting UI issues. Experience with UI testing frameworks like Jest, Jasmine, or Selenium.
- **Version Control Systems:** Strong understanding of Git and experience with version control workflows. Familiarity with Git branching strategies and collaboration using platforms like GitHub or Bitbucket.
- **Web Performance Optimization:** Knowledge of techniques to optimize website performance, such as image optimization, code minification, caching, and lazy loading.
- **UX Principles:** Understanding of user experience (UX) principles and the ability to collaborate with UX designers to ensure seamless user interactions and intuitive interfaces.
- **Responsive Web Design:** Proficient in creating responsive web designs that adapt to different screen sizes and devices using media queries and responsive frameworks.
- **Accessibility:** Familiarity with web accessibility standards (WCAG 2.0/2.1) and experience in implementing accessible UI components and features.

PROFESSIONAL EXPERIENCE

- Worked as a Software Engineer in HCL technologies from Aug 2020 to till date

PROJECT DETAILS

Project #1

Client: Macys/ Bloomingdale's, USA

Description: Macy's & Bloomingdale are for delivery of stories in time and ensured the story status goes green in every iteration. The primary objective of the project is to ensure the Google bot index properly those pages of Macy's & Bloomingdale's which were supposed to be and not which were not supposed to be. This will help in increasing the rank of a page which will result in coming at top on Google search of a product.

Technologies Used - NodeJS, Express Js, MongoDB, Reactjs, HTML5, CSS3, Bootstrap

Project #2

Client: Labstorm

Description: Labstorm is an Intranet portal developed for a leading MNC in IT. It serves as a knowledge sharing hub for its employees. User can share screencasts, AV and comment on other articles. This application has different versions for desktops and tablets.

Technologies Used - NodeJS, Express Js, MongoDB, Reactjs, HTML5, CSS3, Bootstrap

Project #3

Client: Visit Florida

Description: VISIT FLORIDA, this site facilitates tourism industry participation in domestic and international travel trade and consumer shows, as well as media missions to the top global visitor markets.

Technologies Used - NodeJS, Express Js, MongoDB, Reactjs, HTML5, CSS3, Bootstrap

Project #4

Client: GWFO Digital Dashboard

Description: It is intending to build a next generation Omni-channel Dashboard solution for its command center to display data for real-time, interval, historical (trending) on the command center wall and on other devices for Executives, Analysts, and Operations team members.

Roles & Responsibilities:

- Collaborated with cross-functional teams to gather requirements and translate design concepts into functional UI elements.
- Developed responsive web interfaces using HTML5, CSS3, and JavaScript frameworks such as React and Angular.
- Implemented UI components and features, ensuring pixel-perfect rendering across different browsers and devices.
- Optimized frontend code for improved performance, including code minification, caching, and lazy loading techniques.
- Conducted UI testing and debugging to ensure consistent functionality and resolve issues promptly.
- Ensured compliance with web accessibility standards (WCAG 2.0/2.1) to provide

inclusive user experiences.

- Utilized version control systems (Git) for code management, branching, and collaborating with team members.
- Collaborated closely with UX designers, providing technical input and ensuring seamless integration of design and functionality.
- Actively participated in agile development methodologies, contributing to sprint planning, and delivering high-quality UI features.
- Implemented Redux state management for scalable and maintainable application architecture.
- Designed and implemented Redux actions, reducers, and store for managing application state.
- Utilized middleware (Thunk/Saga) to handle asynchronous operations and integrate with backend APIs.
- UI Prototyping: Create wireframes and interactive prototypes to visualize and validate UI designs, incorporating user feedback and iterating on design concepts to achieve optimal user experiences.
- Performance Optimization: Optimize frontend code and assets to improve website performance, including minifying and compressing files, caching strategies, and optimizing image assets for faster loading times.
- UI Framework Integration: Integrate UI components with frontend frameworks and libraries, such as React, Angular, or Vue.js, to leverage their capabilities and enhance UI development efficiency and maintainability.
- Developed a front-end GUI using HTML5, CSS3, JavaScript and React Js and React Hooks and Redux and works in a dynamic Agile software development environment.
- Develop application features as per approved requirements and according to approved practices and procedures including unit tests and required documentation.
- Provide estimations on proposed solutions as well as assigned tasks, timely updates to the management and/or team lead on progress.
- Effectively made use of Class Components, Functional components, Props and State, Forms and Events, Life Cycle Methods and ES6 Java script features.
- Having good knowledge on React Fragments, Context, Portals, React Router.
- Effectively made use of useState Hook, Use Effect Hook and Use Context Hook and Knowledge on useCallback, use Memo and use Custom Hook.
- Creating the API's with Node js, express js and Mango db

Technologies Used - NodeJS, Express Js, MongoDB, Reactjs, Redux, Javascript, HTML5, CSS3, Bootstrap
